

Total NMACs (real-position)
= benign-benign + benign-spoofers

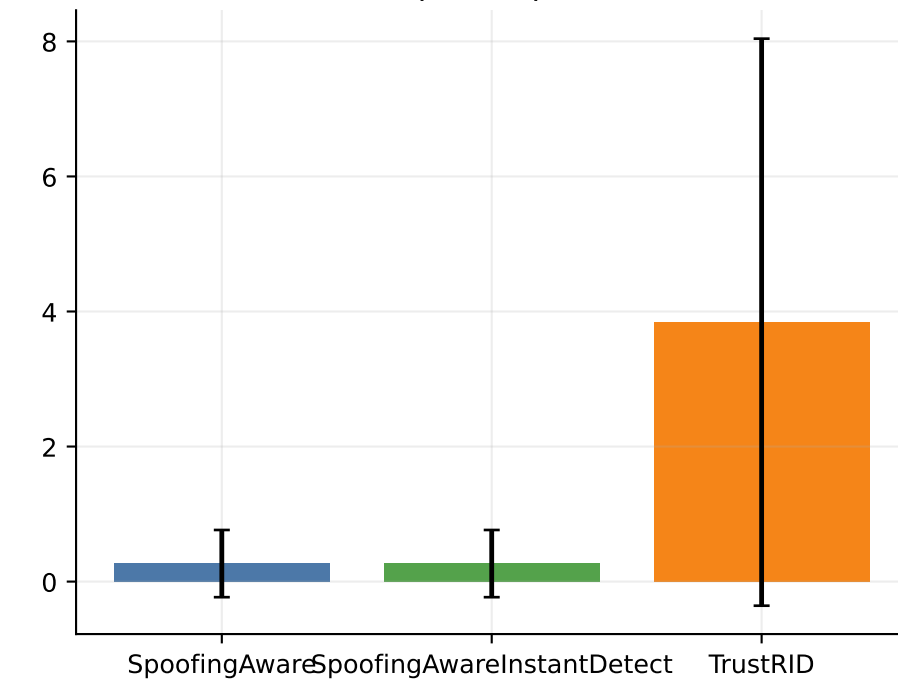

Safety Metrics Across Seeds (mean $\pm$ std)

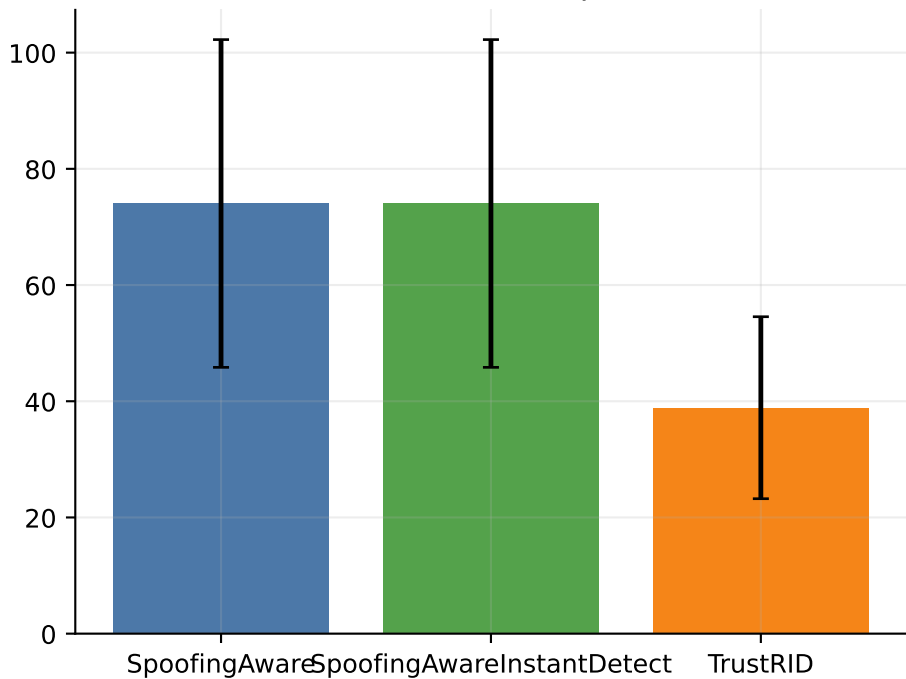

Benign-Benign NMACs

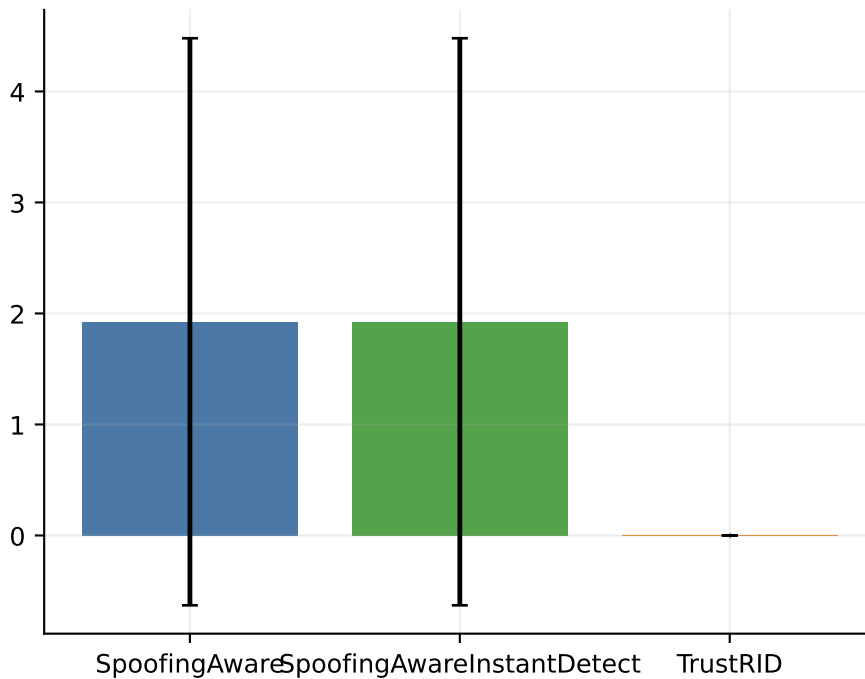

Benign-Spoofers NMACs
(true spoofer position)

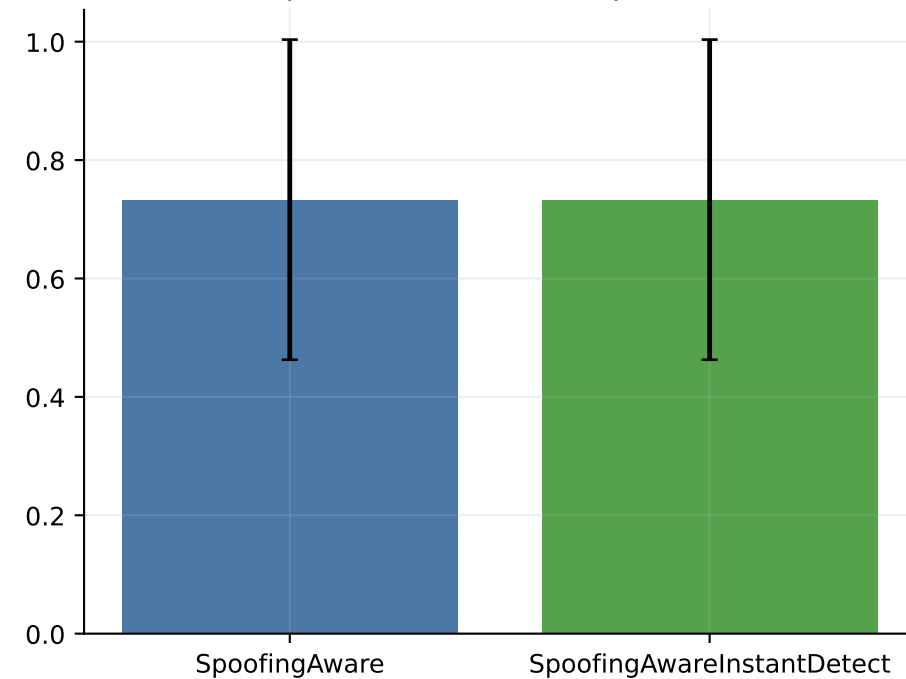

Min distance to true spoofer (m)

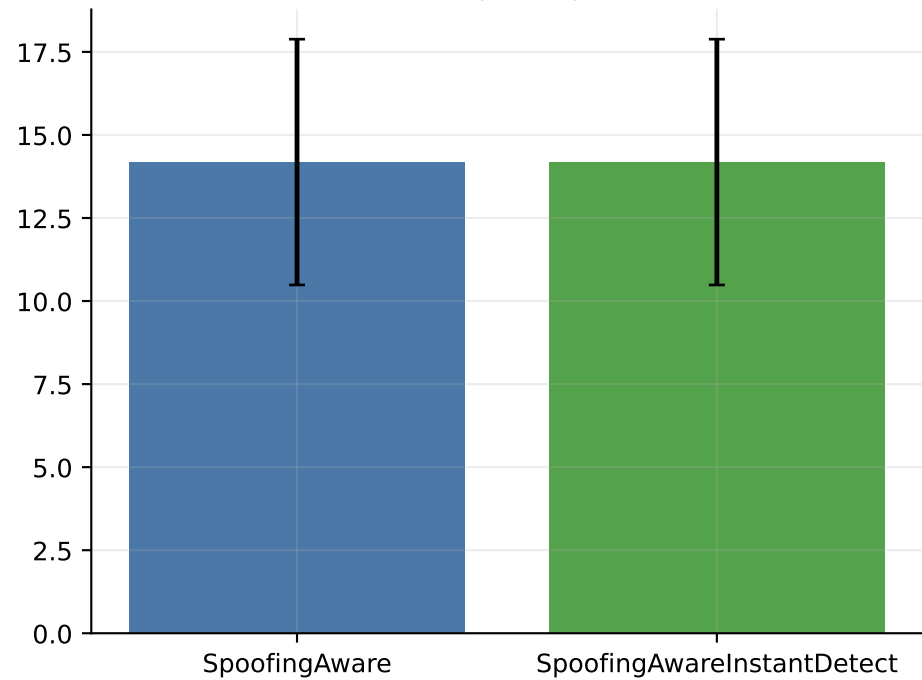

Chance-constraint violations

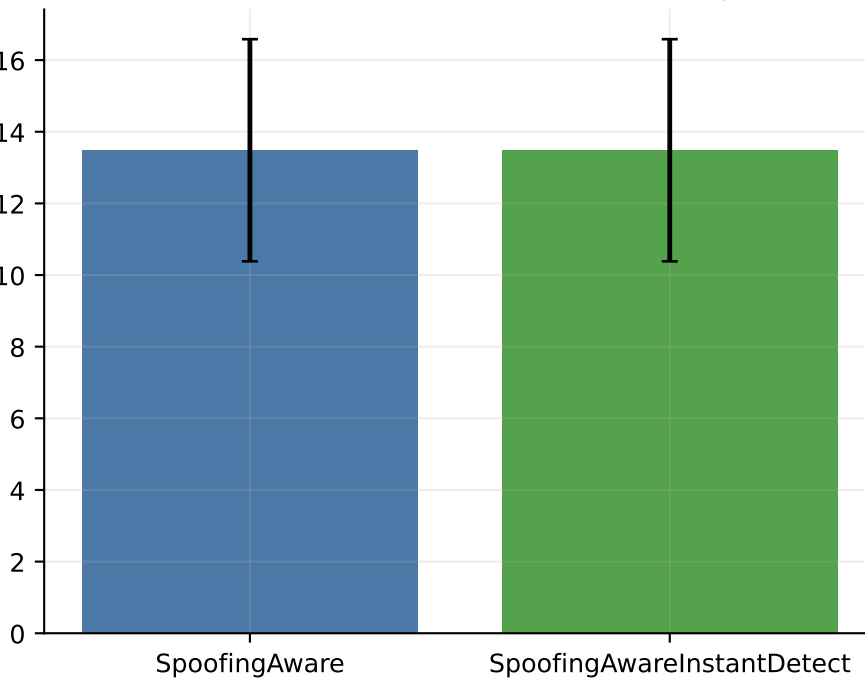

Spoofers containment percent

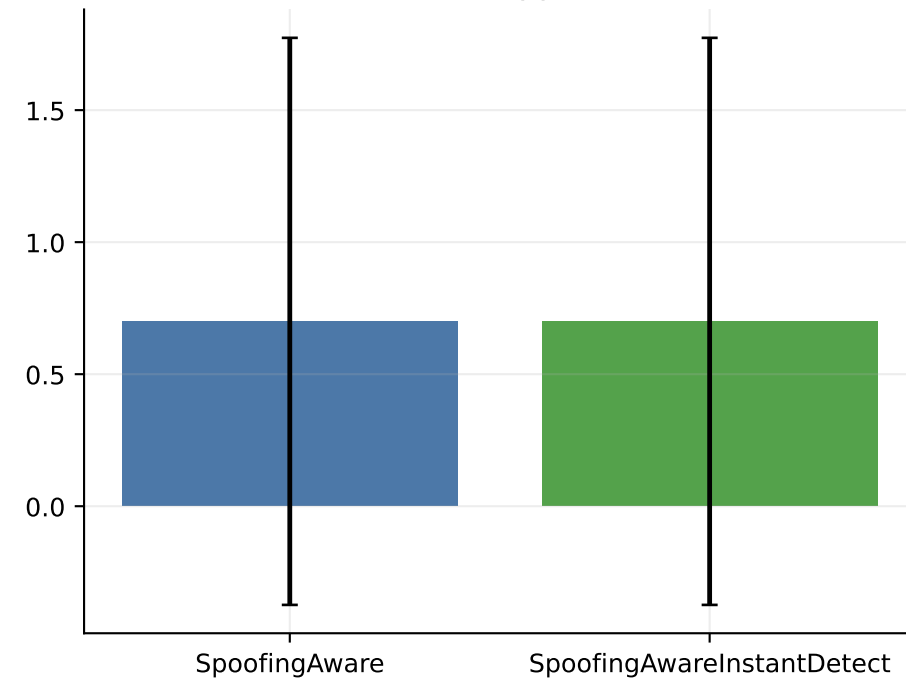

Detection reports processed

Detection callbacks with MLAT attempted

Detection callbacks skipped (receivers < 4)

Skipped MLAT fraction during detection
